Tsunami Vertical Evacuation: Why Now?

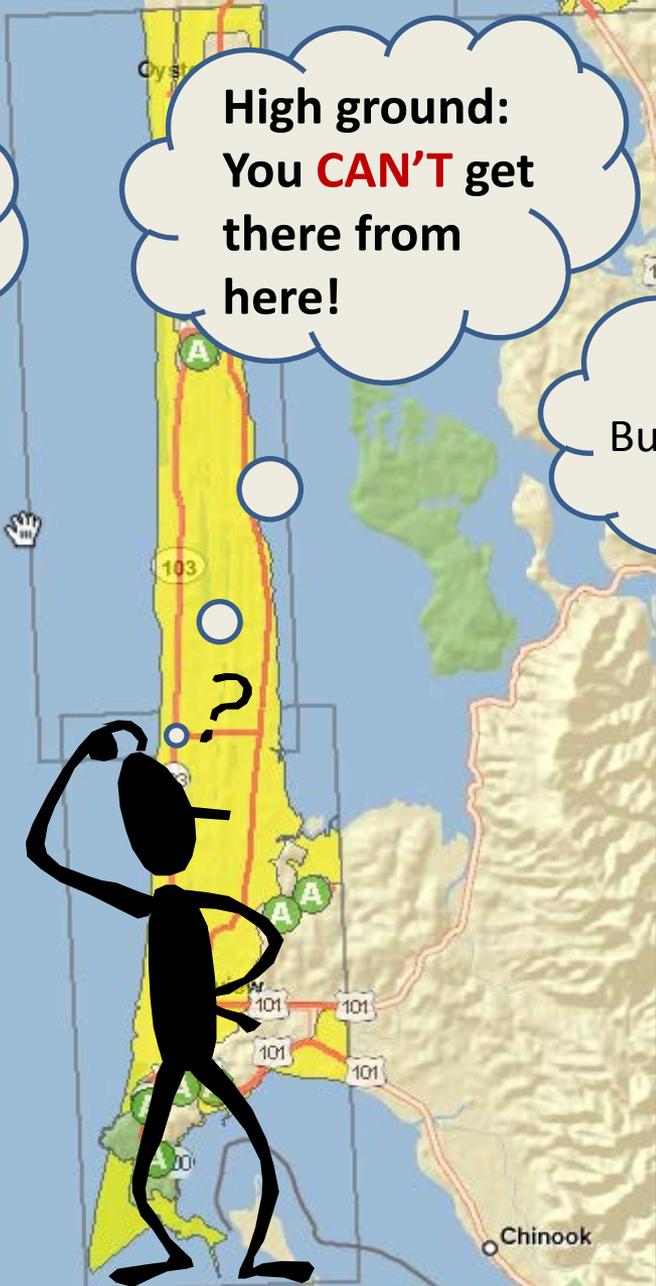

Local Earthquake!

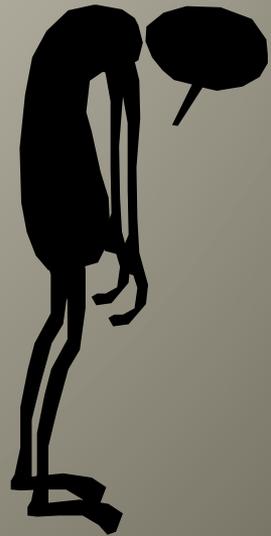

Ah ha!

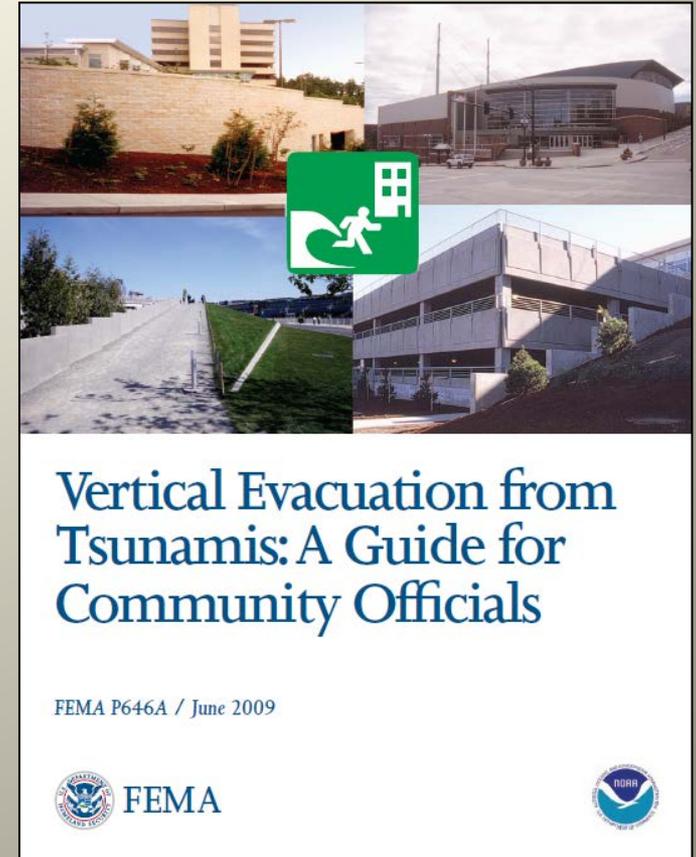

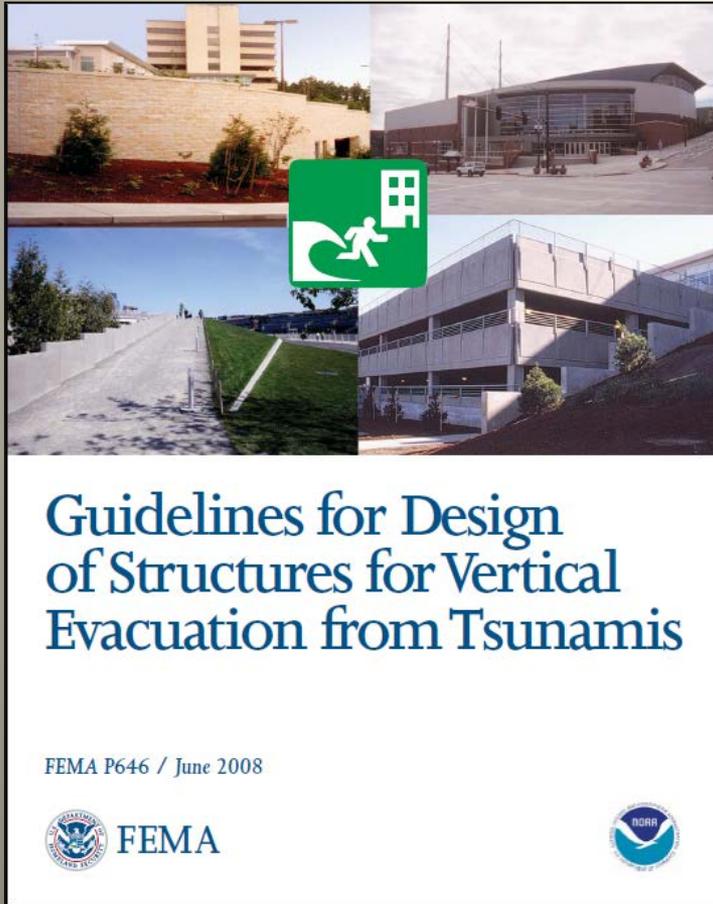

High ground:
You **CAN'T** get there from here!

Bummer!

Official Engineering/Planning Guidance

**+ ASCE 7 DRAFT
CODE LANGUAGE**

Washington Tsunami Hazard Profile:

- Local Source - Cascadia
- ~30-40 minutes before arrival of first wave
- Extremely flat coastal topography coupled with long peninsulas
- Majority of Coastal Communities Likely to be Flooded
- Vulnerable Populations at Risk
 - Seniors
 - Children
 - Etc.
- Untrained Tourist Population that reaches 100k+ during summer

What's at Risk on the Outer Coast of Washington State?

Populations:

- Residents: ~**42,972**
 - Most 65+ years in age, many renters
- Employees: ~**24,934**
- Tourists: **100K+** during summer months
- State Parks: ~**17,029** people (daily average)
- Other populations:
 - Public venues and hotels
 - Dependent-population facilities (schools, day cares, etc.)

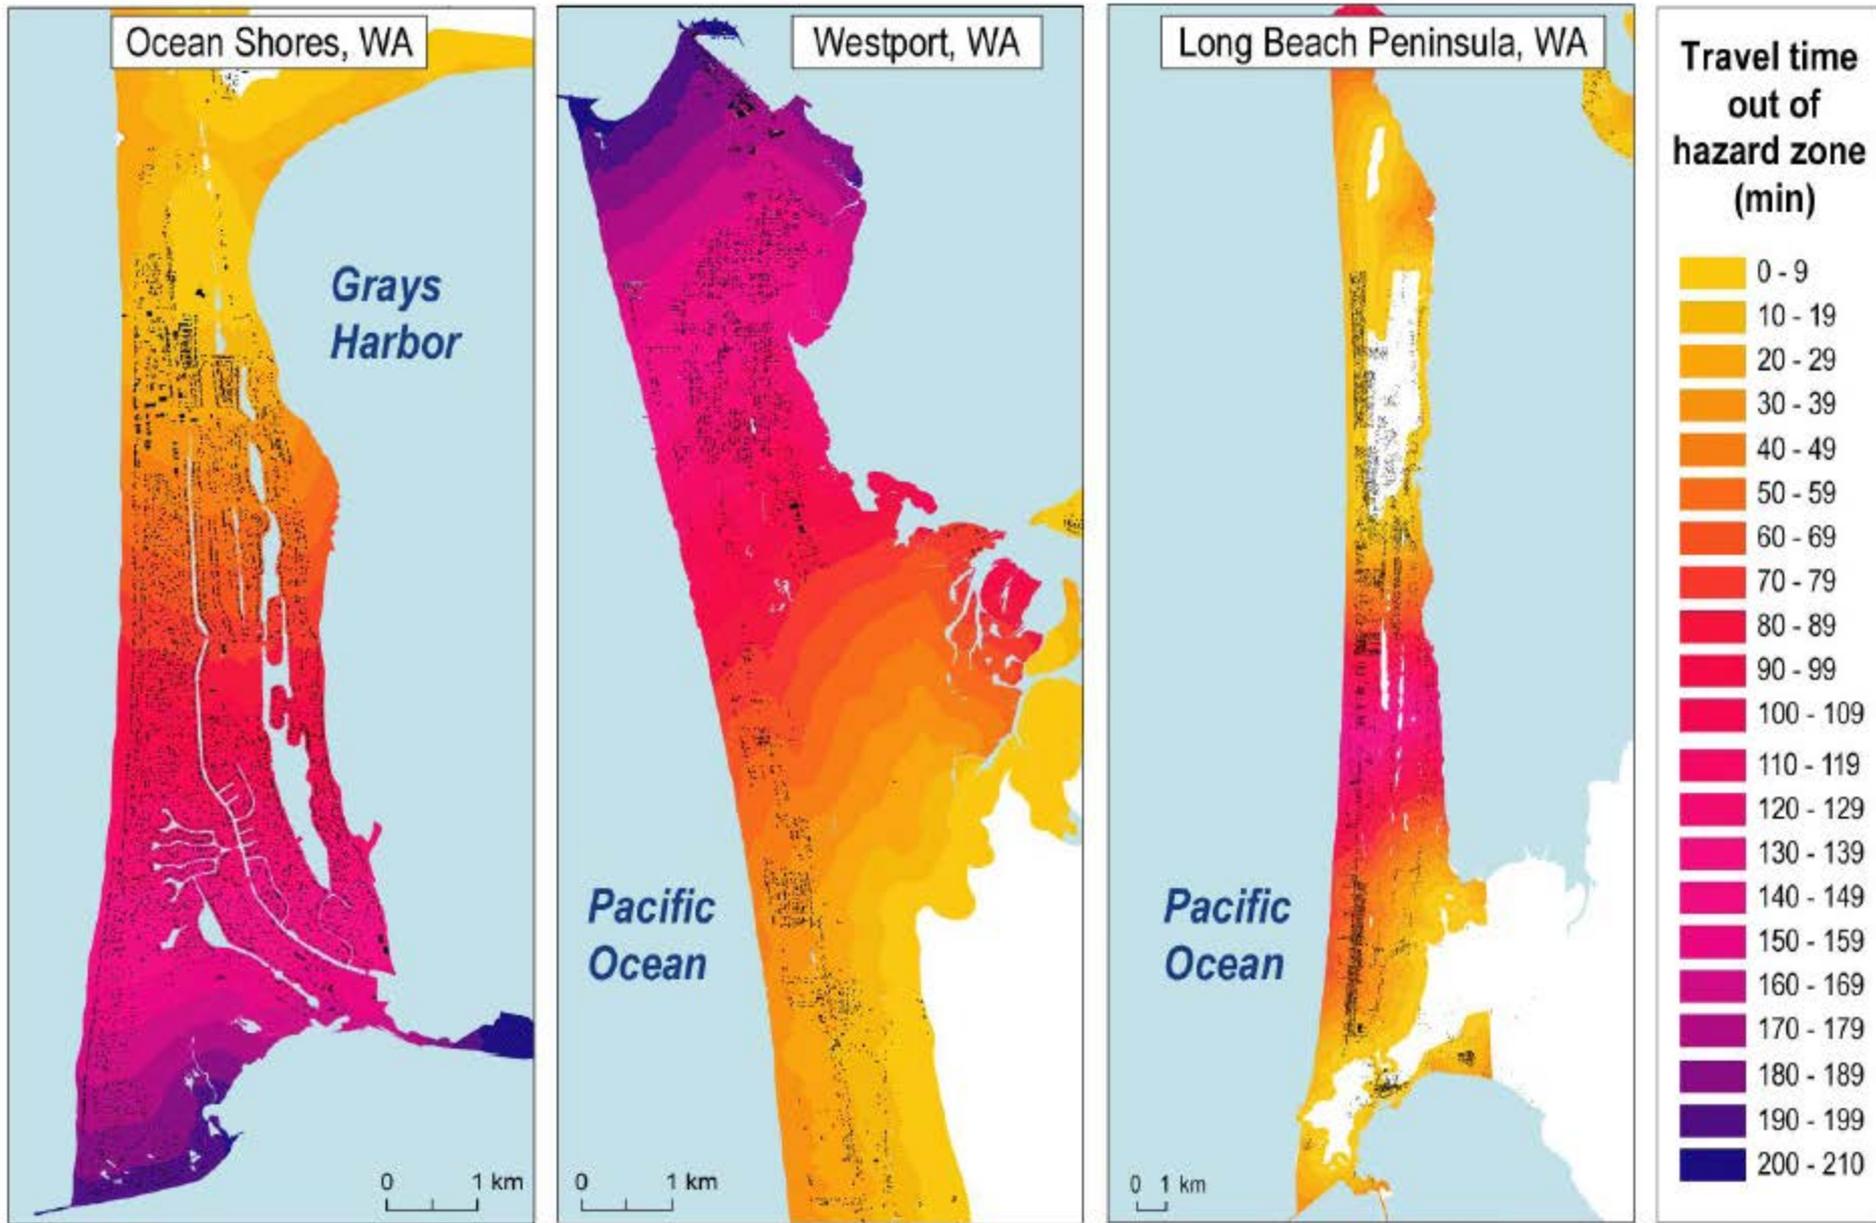

Economy:

- **33%** of workforce in tsunami inundation zone
- Businesses focus on tourism, social services, and manufacturing

Critical and Essential Facilities:

- High number of police stations, fire stations, public-work facilities
- High number of banks, government offices, and markets

Hotspots of Evacuation Challenges

Source: Wood & Schmidlein, 2011

Based on 1.1 m/s travel speed

Project Safe Haven:

- **Community-based, 'top-down' planning approach** (hint: the community is at the top)
 - All options (buildings, towers, berms, etc.) are on the table for consideration by community participants
 - Community members provide 100% of the input, experts are on hand to answer technical questions and facilitate the planning and design meetings.
- After all, this is the **community's plan**...

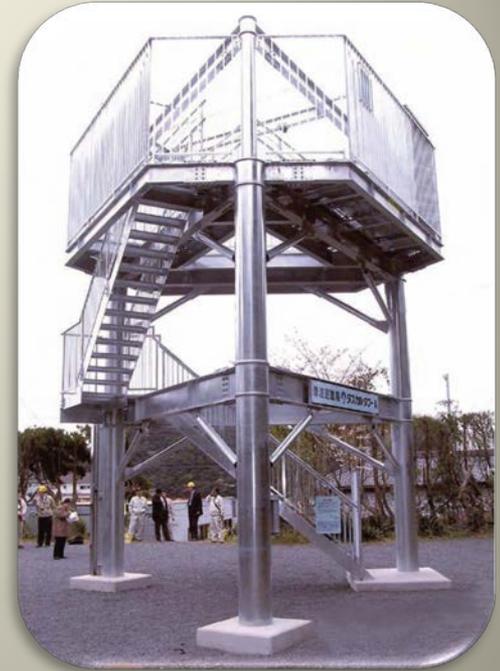

Common Themes:

- School safety!!!
- Seniors and special needs populations
- More conservative travel times – 15 min. instead of 30 min.
- Requested more conservative estimates of elevations

Project Safe Haven Options (from FEMA 646):

Towers –

- Limited Space
- Blocks Views
- Few Options for Shelter

Buildings –

- Expensive
 - Better get it right the first time!
- Very Large, Likely to Block Views
- May require Private Development
 - Incentives for Height?

Berms –

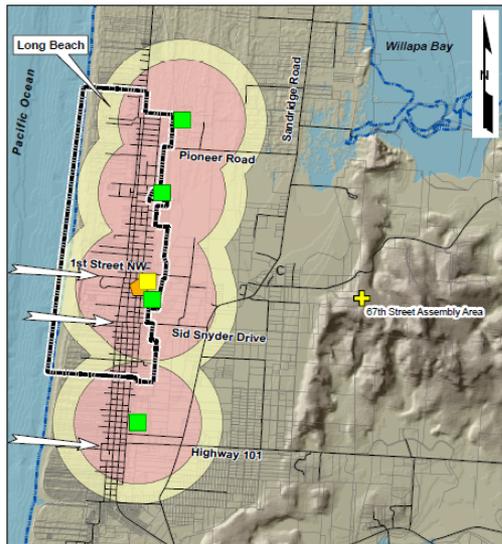

- A Less Expensive Option
- Can be Multi-Purpose
- May be Placed to Limit View Blocking

Draft cost estimates for berm at Long Beach Elementary School *(1,000 person capacity)*

Table 1: Long Beach Berm	
Scope	Cost
Site Utilities	\$49,814
Excavation-Backfill	\$289,512
Concrete	\$153,951
Landscaping	\$74,094
Construction Totals	\$567,370
Design Fees (8%)	\$45,390
General Conditions (10%)	\$56,737
Contractor Fees, O&P (15%)	\$85,106
Construction Contingency (5%)	\$28,369
Estimate/Design Contingency (10%)	\$56,737
Project Total	\$839,708

Implementation!

- Phase IV (FY12 NHTMP funds) – Site Specific Vertical Evacuation Modeling Analysis Completed to support 2 projects
 - Long Beach Elementary School Berm
 - Ocosta Elementary School Gym
- Used Oregon’s L1 Source (~2,500 year recurrence) for consistency and based on FEMA/NOAA guidance and draft ASCE 7 recommendations.
- Iterative process for hazard assessments
- Funding Test Balloons (federal, state, local)
- In FEMA speak they may be considered... “Tsunami Safe Areas”
- Eligible but Not Funded...
- Ocosta School District is moving forward! First structure in U.S. purposefully built to new tsunami-design criteria.
- Long Beach Elementary School is in Environmental Review

Grays Harbor County school to build first U.S. vertical-tsunami refuge

A new scenario for a Cascadia megaquake and tsunami warns that more than 10,000 could be killed and 30,000 injured. But a school district near Westport, Grays Harbor County, is doing everything it can to keep its students safe.

By [Sandi Doughton](#)*Seattle Times science reporter*

A new [scenario](#) for a megaquake and tsunami off the Washington coast warns that the death toll could top 10,000 — but Paula Akerlund is doing everything she can to keep her kids safe. All 700 of them.

The Grays Harbor County school district Akerlund oversees on the Washington coast is preparing to build the nation's first tsunami refuge.
