This information is preliminary, is subject to revision, and it is not for citation or further distribution.

This material solely provides a record of the slides shown during the USGS-NTHMP Workshop held on February 1-2, 2016 and is not a final scientific record complete with references to prior work.

The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information.

Site description

This information is preliminary, is subject to revision, and it is not for citation or further distribution.

This material solely provides a record of the slides shown during the USGS-NTHMP Workshop held on February 1-2, 2016 and is not a final scientific record complete with references to prior work.

The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information.

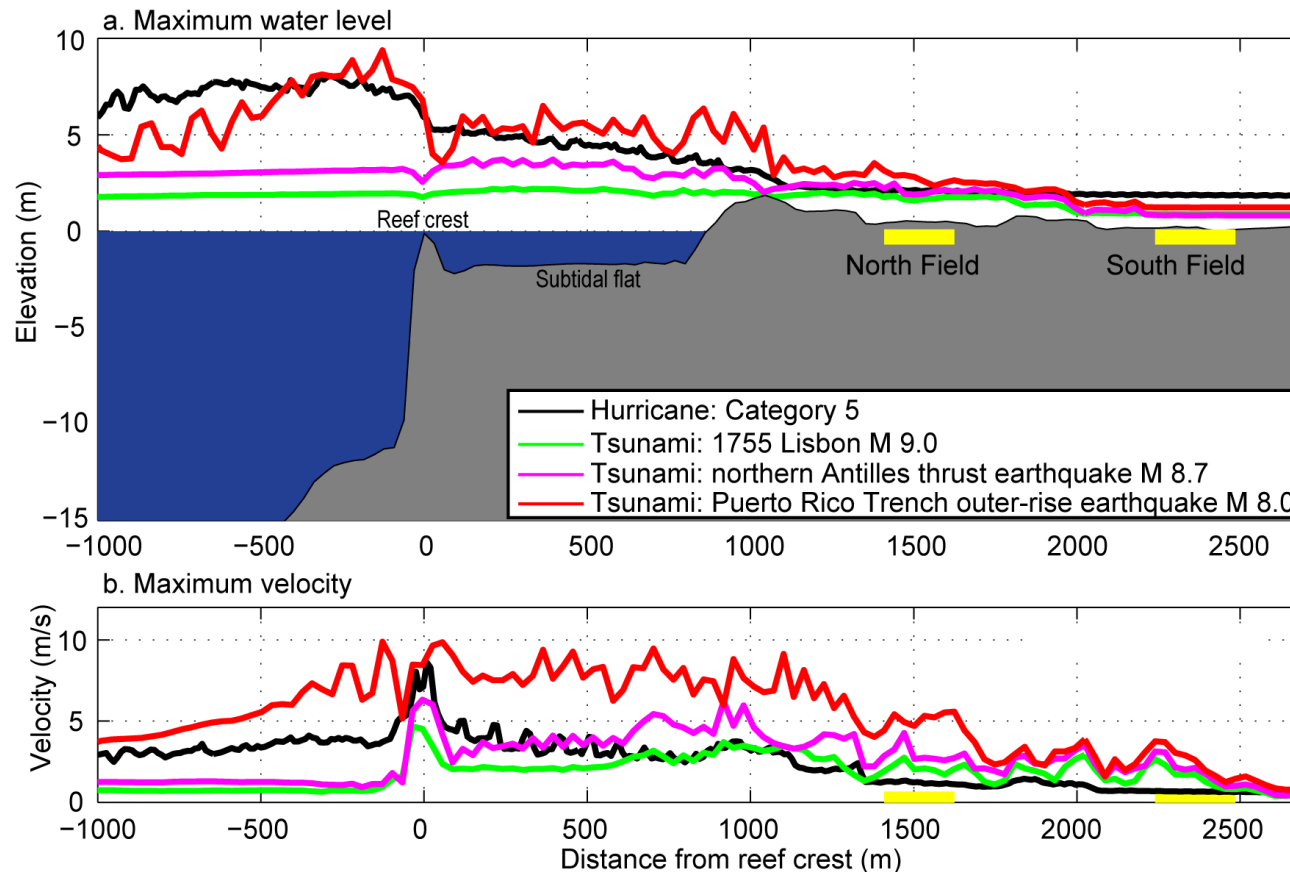

Possible overwash sources

3

This information is preliminary, is subject to revision, and it is not for citation or further distribution. This material solely provides a record of the slides shown during the USGS-NTHMP Workshop held on February 1-2, 2016 and is not a final scientific record complete with references to prior work. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information.

Numerical modeling results

4

This information is preliminary, is subject to revision, and it is not for citation or further distribution.

This material solely provides a record of the slides shown during the USGS-NTHMP Workshop held on February 1-2, 2016 and is not a final scientific record complete with references to prior work.

The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information.

Field measurements of boulders

Boulder wt (kilograms)

- 1.43 - 10.00
- 10.01 - 25.00
- 25.01 - 50.00
- 50.01 - 100.00
- 100.01 - 250.00
- 250.01 - 500.00
- 500.01 - 774.68

This information is preliminary, is subject to revision, and it is not for citation or further distribution.

This material solely provides a record of the slides shown during the USGS-NTHMP Workshop held on February 1-2, 2016 and is not a final scientific record complete with references to prior work.

The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information.

Inverse boulder transport model

Forces

- Drag force, F_D
- Inertia force, F_I
- Lift force, F_L
- Gravitational force, F_g

Forces formulations

- $F_D = 0.5 \rho_f C_D A_N u^2$
- $F_I = \rho_f C_M V \dot{u}$
- $F_L = 0.5 \rho_f C_L A_L u^2$
- $F_g = (\rho_s - \rho_f) V g$
- **For sliding:**
 - $F_D + F_I > \mu_s (F_g - F_L)$

This information is preliminary, is subject to revision, and it is not for citation or further distribution.

This material solely provides a record of the slides shown during the USGS-NTHMP Workshop held on February 1-2, 2016 and is not a final scientific record complete with references to prior work.

The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information.

Calculated flow speed

This information is preliminary, is subject to revision, and it is not for citation or further distribution. This material solely provides a record of the slides shown during the USGS-NTHMP Workshop held on February 1-2, 2016 and is not a final scientific record complete with references to prior work. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information.

Boulder constraints on tsunami source

This information is preliminary, is subject to revision, and it is not for citation or further distribution.
