A tsunami is one of nature's most destructive forces. If you live, work, or play at the coast, you should prepare for a tsunami. Tsunamis don't happen very often, but they pose a major threat to coastal communities. The *NTHMP Tsunami Information Guide* answers questions about:

Tsunami Basics
Tsunamis in the United States
U.S. Tsunami Warning System
Tsunami Safety

A tsunami is one of nature's most destructive forces. If you live, work, or play at the coast, you should prepare for a tsunami. Tsunamis do not occur very often, but they pose a major threat to coastal communities. While they cannot be prevented, there are things you can do before, during, and after a tsunami that could save lives.

If you are near the coast and you

- Get an official tsunami warning,
- Feel a long or strong earthquake,
- See a sudden rise or fall of the ocean, or
- Hear a loud roar from the ocean,

a tsunami may be coming.

Go to high ground or inland!
